WHAT IS CLAIMED IS:

1. A charge calculation apparatus comprising:  
data processing means for creating and/or editing  
data using application software;
- 5 input/output means for inputting or outputting data  
using a data input/output device connected to said charge  
calculation apparatus or a data input/output device  
connected through a network; and
- 10 calculation means for calculating a charge for the  
data input/output device, or a charge for the application  
software independently of the charge for the data  
input/output device.
2. The apparatus according to claim 1, wherein said data  
processing means creates and/or edits document data.
- 15 3. The apparatus according to claim 1, wherein said data  
input/output device comprises at least one of a printer,  
scanner, copying machine, server, facsimile apparatus, and  
external storage device.
4. A charge calculation apparatus comprising:  
first calculation means for calculating a charge for  
a device for inputting or outputting data; and
- second calculation means for calculating a charge for  
application software used to use the device.
5. The apparatus according to claim 4, wherein the
- 25 application software is stored in said charge calculation  
apparatus.

C1

6. The apparatus according to claim 4, wherein the application software is provided through a network.

Sub B2

7.

A charge calculation method comprising:

5

the data processing step of creating and/or editing data using application software;

the input/output step of inputting or outputting data using a data input/output device connected to said charge calculation apparatus or a data input/output device connected through a network; and

10

the calculation step of calculating a charge for the data input/output device, or a charge for the application software independently of the charge for the data input/output device.

15

8. The method according to claim 7, wherein the data processing step comprises creating and/or editing document data.

C1

20

9. The method according to claim 7, wherein the data input/output device comprises at least one of a printer, scanner, copying machine, server, facsimile apparatus, and external storage device.

10

A charge calculation method comprising:

the first calculation step of calculating a charge for a device for inputting or outputting data; and

the second calculation step of calculating a charge for application software used to use the device.

25

11. The method according to claim 10, wherein the

application software is stored in a computer.

12. The method according to claim 10, wherein the application software is provided through a network.

13. A computer-readable storage medium which stores program codes of a charge calculation method, comprising:

— a code of the data processing step of creating and/or editing data using application software;

5  
a code of the input/output step of inputting or outputting data using a data input/output device connected  
10 to said charge calculation apparatus or a data input/output device connected through a network; and

15 a code of the calculation step of calculating a charge for the data input/output device, or a charge for the application software independently of the charge for the data input/output device.

14. A computer-readable storage medium which stores program codes of a charge calculation method, comprising:

a code of the first calculation step of calculating a charge for a device for inputting or outputting data; and

20 a code of the second calculation step of calculating a charge for application software used to use the device.
